

IN THE SPECIFICATION

Please amend the Abstract as follows:

-- ~~The present invention~~ Disclosed is a novel apparatus and method that ~~optimally~~ combines a nightlight and an air freshener  
5 ~~functionality~~ in a single device. The ~~device~~ apparatus includes circuitry where[[by]] a single resistor ~~serves two functions.~~  
~~First, the resistor heats a heating block which in turn that~~  
~~heats an aromatic thereby emitting an aroma and releases a~~  
~~volatile aromatic.~~ The resistor also limits the current that  
10 passes through one or more light emitting diodes. The aromatic may be liquid scented oil held by a container. The container may also include a protruding wick that is ~~protrudes from the~~  
~~container and is heated by the heating block motivating~~  
~~evaporation of the~~ to facilitate oil evaporation. ~~Further, the~~  
15 ~~resistor limits the current that passes through one or more~~  
~~light emitting diodes.~~ The light emitting diodes illuminate the  
[[a]] ~~housing of the device~~ and [[also]] a decorative shield.  
The ~~device~~ diodes may also ~~include~~ illuminate fiber optic cables  
~~which are further illuminated by the light emitting diodes.~~ The  
20 ~~device is designed to receive~~ apparatus receives alternating current from a standard wall outlet. The circuitry utilized by the device ensures that the resistor is continuously powered during both half-cycles of the alternating current resulting in optimal heating of the aromatic.--
